

# Cut-leafed Daisy

## *Brachycome multifida*

### What is it?

Commonly known as the cut-leafed daisy, *Brachycome multifida* grows to 30cm compact shrub. It has small tufted stems with purple and yellow-centred daisy-like flowers with a diameter of approximately 2cm appearing in spring and summer. Preferring full-sun and requiring little maintenance with a good tolerance of frost and drought, it is suitable for rockeries, pots or border areas in most areas..

### Where do they occur?

*Brachycome multifida* occurs naturally in sclerophyll forests and grasslands, and is widespread throughout southern Queensland, New South Wales and Victoria in these habitats.
